ALL-MAKES PARTS & SERVICE

THE NATION'S PREMIER COMMERCIAL TRUCK DEALER GROUP

FleetSelect All-Makes Parts

FleetSelect

1 Year Warranty

FleetSelect is a leading provider of high-quality aftermarket parts and accessories for commercial trucks, designed to keep fleets and individual vehicles running at peak performance. With an unwavering commitment to durability, reliability, and innovation, FleetSelect offers a comprehensive range of products, ranging from Air and Brake, Cab and Body, Wheel End, Driveline, HVAC, PTO and Hydraulic, Sensors, and Suspension.

With FleetSelect, we understand the demands of commercial transportation, which is why our focus is on providing parts that extend lifespan, improve fuel efficiency, and enhance safety.

AIR SYSTEMS

PARTS & SERVICE OPPORTUNITY

It is recommended if the truck was built with an oil coalescing air dryer cartridge, you should only use oil coalescing replacement cartridges. Money will not be saved by buying a less expensive cartridge because the oil that passes through your air system could cause expensive sensors to malfunction, costing you far more than the cost of the oil coalescing replacement cartridge.

WHEN TO REPLACE AN AIR DRYER CARTRIDGE

The recommended time to replace an air dryer cartridge is between 1 to 2 years depending on usage and operating conditions. Typically you would expect to see little to no water draining from your vehicle's purge valve. If you are seeing water, it could be a sign that you need to replace your air dryer cartridge.

FLEETSELECT AIR DRYER ASSEMBLIES & CARTRIDGES

An air dryer cartridge's primary function is to remove moisture and contaminants from the compressed air before it enters the air brake system of a commercial vehicle. This helps prevent corrosion, freezing, and other issues that can compromise braking performance and safety. After 2010, with the more fuel efficient engines, the engines are running hotter. This increased heat, along with lighter weight oil and additives, created more oil vapors in the air system. Oil Coalescing Air Dryer Cartridges perform better to prevent oil vapors from entering the brake air lines.

AC COMPRESSORS

AC COMPRESSOR

An AC compressor in a heavy-duty truck acts as the heart of the air conditioning system, belt-driven by the engine to pressurize and circulate refrigerant. It converts low-pressure refrigerant gas into high-pressure hot gas, forcing it toward the condenser to enable heat removal, which ensures cabin cooling and effective defrosting.

The FleetSelect AC compressor parts listed below are for popular applications. For a complete list of AC compressor parts available, please contact or visit an authorized FleetSelect dealer.

POPULAR AC COMPRESSORS		
FleetSelect Part Number	Description	Industry XREF

PARTS & SERVICE OPPORTUNITY

Second only to refrigerant hose leaks, compressors have the highest rate of failure of any heavy duty truck air conditioner component. Yet compressors rarely fail on their own and it is imperative that the cause of the failure be properly diagnosed and corrected when replacing the compressor. If this is not done, your replacement compressor may fail in a very short period of time.

RECEIVER DRIERS

RECEIVER DRIER

An AC receiver drier in a heavy-duty truck acts as a filter, moisture absorber, and temporary storage tank for liquid refrigerant on the high-pressure side of the system. It protects the AC compressor and expansion valve by removing contaminants, moisture, and debris, ensuring clean, dry refrigerant flows to maintain cooling performance. Failure to function can lead to reduced cooling, noisy operation, and ultimately damage to the compressor.

The FleetSelect receiver drier parts listed below are for popular applications. For a complete list of receiver drier parts available, please contact or visit an authorized FleetSelect dealer.

POPULAR RECEIVER DRIERS		
FleetSelect Part Number	Description	Industry XREF
825-3990	A/C Receiver Drier	F37-1019
825-3988	A/C Receiver Drier - PACCAR	F37-1022-100
825-3989	A/C Receiver Drier - PACCAR	F37-1022-200
825-3983	A/C Receiver Drier	F37-6011
825-3985	A/C Receiver Drier	F37-6013
800-2555	A/C Receiver Drier	F37-6016
825-3992	A/C Receiver Drier - PACCAR	F37-6017
825-4103	A/C Receiver Drier - 3/8" Male O-ring	JA11350
825-4425	A/C Receiver Drier	JA19600

PARTS & SERVICE OPPORTUNITY

Maintain your heavy-duty truck's AC receiver drier by replacing it every 2 years, or immediately whenever the refrigeration system is opened for repairs, to prevent moisture saturation. A clogged or saturated drier can cause significant pressure drops, compressor failure, and reduced cooling, necessitating immediate replacement rather than repair. It is crucial to replace the drier whenever the AC system is opened for repairs.

3-IN-1 POWER & AIR HOSE ASSEMBLIES

TRP 3-in-1 Power & Air Hose Assemblies provide the standard electrical and air connections between heavy-duty tractors and trailers. The heavy-duty spiral wrap protects the assembly from abrasion without sacrificing flexibility. A single-unit design ensures faster and easier trailer hookups and drops. Additional durability comes from using rubber air brake hoses, which are tougher than nylon tubing coiled air lines. Add gladhands and a suspension device (typically a tender spring kit or pogo stick) to make a complete tractor-trailer interconnect system. These assemblies have upgraded components and materials for improved performance and longevity.

FEATURES & BENEFITS

- » Spiral wrapped for excellent durability and easy handling
- » Dual-purpose grips protect hoses and give a firm grip for gladhand connections
- » ABS-ready 7-way cable (4/12 2/10 1/8) with copper conductors & crimped brass terminals

*Better Tier:

- » Extended 2-year warranty
- » Electrical cable (-85°F)
- » Gladhand grips
- » Plug housing & spring guards
- » Hanger clamp

RELATED PARTS

- » Gladhands
- » Tender Spring Kit

AC FREON COMPRESSORS

TRP Freon Compressors feature a superior pad lock design that helps prevent vibration-related fitting leakage. A one-piece, all-steel crimp fitting design allows for stronger and more durable connection. TRP Freon Compressors are "sealed" with factory nitrogen charge that keeps deadly moisture out of the compressor. Significant moisture damage can occur in as little as two hours of ports being unsealed.

FEATURES & BENEFITS

- Great value, quality at a competitive price
- Clutch equipped with rubber dampened armature that increases clutch life by more than 30%
- Diode in the harness protects clutch from harmful electrical surges
- Meets industry specifications

SUMMER SERVICE TIPS

TO KEEP YOUR TRUCKS ON THE ROAD

ENGINE COOLANT

TRP EXTENDED LIFE RED COLOR

SERVICE LIFE

On Highway - 600,000 mi.
Off Highway - 12,000 hrs

APPLICATION

Heavy Duty Truck Diesel, Gasoline
Natural Gas Powered Engines

TOTAL COST OF OWNERSHIP
Low

KEY DISTINCTIONS

Engineered fluid that contains a unique extended life carboxylate inhibitor system and nitrite/molybdate as secondary inhibitors.

This product requires no traditional supplemental coolant additives (SCAs) or ELC extender additions.

TRP EXTENDED LIFE NITRITE FREE RED COLOR

SERVICE LIFE

On Highway - 1,200,000 mi.

APPLICATION

Heavy Duty Truck Diesel, Gasoline,
Natural Gas Powered Engines

TOTAL COST OF OWNERSHIP
Lowest

KEY DISTINCTIONS

Based on proven organic additive technology for extended life operation up to 1,200,000 miles on highway Class-8 trucks without the need of supplemental coolant additives (SCAs) or extenders.

Nitrite free formulation provides improved protection of aluminum components in modern engines and meets many of the newest OEM specifications.

Summer heat can take a serious toll on your semi truck if it's not properly maintained. From overheating engines to tire blowouts, warmer temperatures amplify small issues into costly breakdowns. Staying proactive with seasonal maintenance not only improves performance but also helps keep your drivers safe and your trucks on the road longer.

Keep Your Cooling System in Check

High temperatures put extra strain on your engine's cooling system. Make sure coolant levels are topped off and inspect hoses, clamps, and radiators for leaks or wear. A properly functioning cooling system is your first line of defense against overheating. Scheduling routine pressure tests can also help identify hidden issues before they lead to failures.

Inspect Tires Regularly

Hot pavement increases tire pressure and the risk of blowouts. Check tire pressure frequently and ensure it matches manufacturer recommendations. Also, look for uneven wear or damage, as summer conditions can accelerate deterioration. Rotating tires at recommended intervals can further extend their lifespan and improve overall performance.

Test Your Battery

Heat can be just as damaging to batteries as cold weather. High temperatures can cause battery fluid to evaporate and internal components to degrade. Regular testing and cleaning of terminals can prevent unexpected failures. Replacing aging batteries before peak summer months can help avoid roadside downtime.

Monitor Fluid Levels and Quality

Engine oil, transmission fluid, and brake fluid all play critical roles in keeping your truck running smoothly. Summer heat can cause fluids to thin or break down faster, so check levels often and replace them as needed to maintain optimal performance. Using manufacturer-recommended fluids ensures your truck stays protected under extreme conditions.

Ensure Your A/C System is Working Properly

Driver comfort is more than a luxury—it's a safety issue. A functioning air conditioning system helps prevent fatigue and keeps drivers alert during long hauls. Have the system inspected to ensure it's cooling efficiently and free of leaks. Regular cabin air filter replacements can also improve airflow and system efficiency.

Stay in the know with DTI Tech Talk, a dedicated space where our expert technicians share important updates, tips, and insights to keep your truck running at its best. Whether it's maintenance reminders, new technology, or service best practices, this section is designed to keep drivers informed and empowered—straight from the service bay to the road.

Automatic Slack Adjusters: Do Not “Adjust Away” the Problem

Automatic slack adjusters are designed to maintain proper brake adjustment as the brake linings and drums wear during normal operation. On Peterbilt, Volvo, Mack, and other heavy-duty vehicles equipped with S-cam drum brakes, the automatic slack adjuster is not just a convenience item. It is part of the foundation brake system and directly affects stopping performance, brake balance, lining life, drum life, and roadside inspection compliance.

The most important rule is simple: Adjusting an automatic slack adjuster that is not adjusting does not fix the problem and is a safety issue.

If a brake has excessive pushrod stroke, manually tightening the automatic slack adjuster may bring the stroke back into range temporarily, but it does not correct the root cause. Manufacturers like Bendix, Wabco, Meritor, Haldex, and others warn that automatic adjusters should never be operated as manual adjusters except when necessary to move the vehicle off the road for service. Excessive stroke indicates a problem with the automatic slack adjuster, its installation, or related foundation brake components. Manual adjustment will not fix the problem and can give the operator a false sense of brake security.

In practice, that means an out-of-adjustment automatic slack adjuster should trigger an inspection and proper repair and/or maintenance to address the issue.

What to Check:

When excessive chamber stroke is found, inspect the complete brake assembly and adjustment system:

- Measure applied stroke correctly with the brakes released, parking brakes released, wheels chocked, and a full brake application.
- Compare stroke to the legal limit for the brake chamber size and type.
- Check that slack adjusters on the same axle are operating at similar angles.
- Inspect the brake chamber, pushrod, clevis, clevis pins, bushings, and retaining hardware.
- Check the S-cam, camshaft bushings, rollers, return springs, shoes, linings, drums, and anchor hardware.
- Verify the slack adjuster is the correct part number and arm length for the application.
- Verify the clevis and installation angle are correct.
- Lubricate serviceable slack adjusters and S-cam components according to the manufacturer's service instructions.
- Replace any automatic slack adjuster or related foundation brake component that fails the manufacturer's operational checks.

Bottom Line:

Do not “adjust and release” an automatic slack adjuster that is out of adjustment. Treat it as a symptom.

The proper response:

Measure the stroke. Inspect the complete foundation brake. Verify the slack adjuster installation and operation. Repair or replace the failed component. Then recheck brake stroke before returning the vehicle to service.

As always, refer to the manufacture's service manual for proper procedures and product specific details.

For 3 or more units in a call-out, we will waive the call-out fee. No call-out fee within 50 mile radius of Dobbs Peterbilt branch. Above pricing is inclusive of FleetGuard Filters. Any proprietary or special request filters will incur additional charges. Pricing reflects draining of fuel/water separator filter. Replacement of Fuel/Water Separator will incur additional charges. ***Pricing does not reflect park plug replacement.

DOBBS LEASING

LEASING & RENTAL SERVICES

FLEXIBLE FLEET SOLUTIONS

- Premium Peterbilt trucks for daily, weekly, monthly, or Rent-to-Own needs.
- Cover seasonal demand, expand into new markets, or replace down units.
- Custom leasing programs tailored to your business.

WHY DOBBS

- High-quality, driver-approved equipment.
- Competitive rates & low operating costs.
- 24/7 roadside assistance.
- Specialized specs & national account support.

SERVICES WE OFFER

- Full Service Leasing
- Short & Long Term Rentals
- TRAC Leases
- Rent to Own Programs
- Maintenance Program
- Vocational Rentals
- Vocational Leases
